About this publication

The document provides a brief walkthrough of the installation and configuration of the Lenovo XClarity Management Pack (MP) (Lenovo XClarity Adapter or plugin) developed for VMware vRealize Operations Manager (vROps). In a nutshell, this document describes how to install, configure, and use the plugin.

Conventions and terminology

Table 1. Conventions

Convention	Description
Bold	Indicates text on a window, besides the window title, it includes menus, menu options, buttons, fields, and labels.
	Example: Click OK .
Italic	Indicates a variable, which is a placeholder for the actual text provided by the user or system.
	Example: copy <source-file> <target-file></target-file></source-file>
	Note: Angled brackets (< >) are also used to indicate variables.
DIALOG BOX/CODE	Indicates text displayed in the dialog box or if you have entered. For example:
	# PAIRDISPLAY -G ORADB
Note	These notices provide important tips, guidance, and advice.

Table 2. Terminology

Term/ acronym	Full Name
LXCA	Lenovo XClarity Administrator
MP	Management Pack
PFA	Predicted failure alerts
vROps	VMware vRealize Operations Manager
vSAN	Virtual storage area network
vRLI	VMware vRealize Log Insight
XCC	Lenovo XClarity Controller

Chapter 1. Lenovo XClarity Adapter introduction

The Lenovo XClarity Management Pack (MP) developed for VMware vRealize Operations Manager (vROps) monitor the health, capacity, and performance of Lenovo XClarity Administrator (LXCA) resources. It provides visibility to the Lenovo XClarity resources in the Lenovo XClarity Administrator (LXCA).

The MP collects data from the LXCA resources, identifies any issues, facilitates the monitoring of workload issues, and suggests corrective actions.

It also helps you drill down to assess the health of a single resource so that you can use the resource as optimal.

Overview

The management pack for Lenovo vRealize & Analytics Integration for Lenovo vSAN Ready Nodes utilizes the vROps analytics and UI engine to collect data from Lenovo VX series vSAN Ready Nodes and monitor it. The MP for Lenovo XClarity Adapter includes the following features with the vROps UI:

- A predefined dashboard lists the LXCA resources. It provides a global view of the relationship between resources, such as connected chassis, servers, power supplies, and ESXi connectivity.
- LXCA resources monitoring
- Inventory tree
- Alert notifications and badges enable the administrator to optimize the monitoring and management of the LXCA resources.
- Logs

2 Lenovo XClarity Integrator Management Pack for VMware vRealize Operations Manager Installation and User Guide

Chapter 2. Installing the management pack

Administrators install the Lenovo XClarity Administrator's vROps Management Pack to monitor the health, capacity, and performance of the Lenovo XClarity Administrator resources. After installing the management pack, configure the cloud account and then configure an adapter instance. This topic details the following:

- "Prerequisites" on page 3
- "Configuring the cloud account" on page 3
- "Installing the Lenovo XClarity Adapter" on page 4
- "Adding an adapter instance" on page 5
- "Removing the Lenovo XClarity adapter" on page 7

Prerequisites

Before installing Lenovo XClarity vROps Management Pack, verify that you have configured your environment according to the requirements in this section.

Component	Supported version
VMware vCenter Server	7.0 and 8.0
VMware vRealize Operations Manager	8.5, 8.6, 8.10, and 8.12
Lenovo Servers	ThinkSystem servers and ThinkAgile VX servers
Lenovo XClarity Administrator	3.5.0, 3.6.0, and 4.0.0
Supported web browsers	Chrome (89.0 and above), Firefox (83.0 and above)

Configuring the cloud account

Configure the cloud account as mentioned in this topic to display the vSAN Hardware Topology.

Before you begin

- Ensure that you have installed the Lenovo XClarity adapter using the PAK file.
- Ensure that the prerequisites are met. For more details, see "Prerequisites" on page 3.

Procedure

To configure the cloud account, complete the following steps:

1. Start the vRealize Operations Manager administrative user interface in your web browser and log in as an administrator.

For example, use the URL https://<vROps_IP_address> where the vROps IP address is the IP of the vROps node.

- 2. Navigate to **Data Sources** \rightarrow **Integrations** \rightarrow **Accounts**.
- 3. Select ADD ACCOUNT, select vCenter as Account Types.

Note: For V8.5 and earlier versions of vROps, click the **Administration** tab. On the **Solutions** page, select **Solutions** \rightarrow **Cloud Accounts** \rightarrow **vCenter** \rightarrow **ADD ACCOUNT**.

- In the Cloud Account Information section: Enter an appropriate name (like FQDN) which represents the cloud account you want to connect to in the Name field. Optionally, enter the description in the Description field.
- 5. In the **vCenter** tab, enter the following details:

• Connect vCenter: Enter the vCenter Server IP and vCenter credentials.

Credentials: Click the add credentials icon (+), enter the password of the vCenter that you are adding, and click **OK**.

- Validate the connection by reviewing and accepting the certificate by clicking **ACCEPT**.
- 6. Click the **vSAN** tab and perform the following details:
 - Enable the vSAN configuration.
 - Select the Enable SMART data collection check box.
 - Validate the connection by reviewing and accepting the certificate by clicking ACCEPT.
- 7. Click ADD.

The cloud account is configured and listed as follows.

Installing the Lenovo XClarity Adapter

Download the PAK file for VMware vRealize Operations Manager Management Pack for Lenovo XClarity from the VMWare marketplace. Save the PAK file to a folder on your local system.

Before you begin

- Ensure that the vROps (supported version: v8.0 to v8.6) is installed and configured. For more details, see VMware documentations.
- Ensure that you have the PAK file.
- Ensure that the prerequisites are met. For details, see "Prerequisites" on page 3.

Procedure

To install the Lenovo XClarity Adapter, complete the following steps.

1. Start the vRealize Operations Manager user interface in your web browser and log in as an administrator.

For example, use the URL https://<vROps_IP_address> where the vROps IP address is the IP of the vROps node.

- 2. Navigate to **Data Sources** → **Integrations** → **Repository**.
- 3. Click ADD.

Note: For V8.5 and earlier versions of vROps, click the **Administration** tab. On the **Solutions** page, navigate to **Solutions** \rightarrow **Repository**, and then click **ADD/UPGRADE** to upload the PAK file.

- 4. On the **Add Solution** page, click **BROWSE** to go to the location of the management pack files that you are installing. Select the PAK file.
- 5. Select Install the PAK file... to override earlier PAK installation if it was previously installed.
- 6. Select **Reset Default...** to override the existing settings. On selecting this option, the alert definitions, symptoms, recommendations, policy definitions, views, dashboards, and reports are overwritten.

The Reset Default Content dialog box is displayed.

- 7. Read the warning message and select the **I understand that ..** checkbox and click **OK** to reset default content.
- 8. Click **UPLOAD** and wait until the .pak file is uploaded.

After the file is uploaded, the summary of the MP is displayed.

9. Click **NEXT** to continue the installation.

Note: If you want to quit the installation, click CANCEL.

10. In the End User License Agreement page, read the End User License Agreement, select <I accept the ...>. Click NEXT.

The management pack installation will be displayed on the **Install Solution** page. The process may take up a few minutes.

11. Click FINISH.

On completing the installation, the Lenovo XClarity Adapter is displayed in the list of installed solutions as follows:

Adding an adapter instance

Adapter instances specify the adapter type and the information needed for the vRealize Operations Manager to identify and access resources. The Lenovo XClarity Adapter instances provide access to the resources of the Lenovo XClarity Administrator. Add one adapter instance per LXCA.

Before you begin

- Ensure that you have installed the Lenovo XClarity adapter using the PAK file.
- Ensure that the prerequisites are met. For more details, see "Prerequisites" on page 3.

Procedure

To add an adapter instance, complete the following steps.

1. Start the vRealize Operations Manager administrative user interface in your web browser and log in as an administrator.

For example, use the URL https://<vROps_IP_address> where the vROps IP address is the IP of the vROps node.

- 2. Navigate to **Data Sources** → **Integrations** → **Accounts** → **ADD ACCOUNT**.
- 3. Select the LXCA adaptor from the existing list for adding the account **Lenovo XCIarity Adapter**. The **New Account** page is displayed.

Note: For V8.5 and earlier versions of vROps, click the **Administration** tab. On the **Solutions** page, select **Solutions** \rightarrow **Other Accounts** \rightarrow **ADD ACCOUNT**, select the LXCA adaptor from the existing list for adding the account Lenovo XClarity Adapter \rightarrow New Account.

- 4. On the New Account page, configure Cloud Account Information and Connection Information:
 - a. Name: Enter a descriptive name of the instance.
 - b. Description: Enter a description with more details.
- 5. Configure these settings based on the adapter instance type:
 - a. LXCA IP or Hostname: Enter the LXCA IP or a descriptive hostname of the instance.
 - b. Port: Enter the port number if you want to change it, the default value is 443 as shown in the preceding screenshot.
 - c. Credentials: Click the add credentials (+) icon, enter an appropriate credential name that includes username and password of the adapter instance you are adding, and click **OK**.
 - d. Collector/Group: Select the required collector group from the drop-down list.
- 6. Click **VALIDATE CONNECTION** to validate the values you entered. If the adapter instance configures correctly, an informative message is displayed. Click **ACCEPT** to continue.
- 7. In the Advanced Settings, select the Auto Discovery as True.

Important: After the adapter instances are created, the vRealize Operations Manager Collector requires several minutes to collect statistics, depending on the size of the system. The default collection cycle is 15 minutes. Once the initial data is collected, subsequent statistical collections run quickly.

Large system configurations require a longer duration to collect metrics, resources, and update dashboards. To configure the duration, click **Environment** \rightarrow **Inventory** \rightarrow **Adapter Instances** \rightarrow **Lenovo XClarity Adapter Instance** \rightarrow **Edit Object** \rightarrow **Advanced Settings** \rightarrow **Collection Interval**, select the required time (unit: second), and click OK.

8. To finish adding the adapter instance, click **ADD**. If you do not want to continue adding the adapter instance operation, click **CANCEL**.

Removing the Lenovo XClarity adapter

Follow the task if you need to uninstall the management pack using the vROps user interface.

Procedure

- 1. Log in to vROps as an admin user.
- 2. Navigate to Data Sources → Integrations → Repository. The Lenovo XClarity Adapter is displayed.

Note: For V8.5 and earlier versions of vROps, navigate to the **Administration** tab. In the left pane, click \rightarrow **Repository**. The **Lenovo XClarity Adapter** displays in the right pane.

3. Click **Uninstall** to remove the selected management pack.

A warning dialog box is displayed.

Note: After removing the adapter instance, you cannot revert the operation. The associated data, metadata, and related files are deleted permanently.

4. Select I understand the risk and agree and click OK to complete the uninstallation.

8 Lenovo XClarity Integrator Management Pack for VMware vRealize Operations Manager Installation and User Guide

Chapter 3. Monitoring Lenovo XClarity Adapter

After installing and configuring the MP, you must add an adapter instance to use the Lenovo XClarity Adapter to view the following:

- "Viewing data collection status for an instance" on page 9
- "Dashboards" on page 10
- "Viewing the inventory tree" on page 16
- "Monitoring the discovered resources" on page 17
- "Using the badges to monitor resources" on page 20
- "Viewing alerts" on page 20

Viewing data collection status for an instance

After you set up an adapter instance, verify whether the instance is collecting data.

Before you begin

Ensure that you have added an adapter instance. After adding the instance, the vRealize Operations Manager Collector requires some time to collect the initial data.

Procedure

To view collected data, complete the following steps.

- 1. Log in to vROps as an admin user.
- Navigate to Data Sources → Integrations → Accounts → Lenovo XClarity Adapter, check whether the instance status is OK.

Note: For V8.5 and earlier versions of vROps, navigate to Administration \rightarrow Solutions \rightarrow Other Accounts \rightarrow Instance to check the instance status.

Dashboards

The Lenovo XClarity Adapter management pack dashboards provide an overview of the performance and health of XClarity Administrator resources. The dashboards enable you to view, monitor, and troubleshoot resources

Dashboards provide a graphic representation of the status and relationships of selected objects. The standard dashboards are delivered as templates.

Before you begin

- Log in to the vRealize Operations Manager UI using admin credentials.
- From the vRealize Operations Manager main menu, select Visualize → Dashboards.

Note: For V8.5 and earlier versions of vROps, from the vRealize Operations Manager main menu, select **Dashboards** \rightarrow **All Dashboards**. The available dashboards are listed in the Lenovo XClarity folder.

Widget	Description
Environment Overview	Lists the resources and their health. Select the required resource to populate the related widgets.
Alert List	Lists the alerts of the resource selected in the Environment Overview widget.
Property List	Lists the details of the resource selected in the Environment Overview widget.
Object List	Lists the details of the object selected in the Environment Overview widget. It also displays the collection state and status of the resource.
vSAN Cluster	Lists the details of the vSAN cluster. Select a vSAN cluster to populate the related widgets.
Lenovo Node to Host Mapping	Lists the node to host mapping of the resource selected in the vSAN Cluster widget.
Lenovo Rack to Node Mapping	Lists the rack to node mapping details.

• Lenovo XClarity Power & Thermal Information

Widget	Description
Rack	Lists the details and utilization of the rack. To view further details of a rack, click the rack on the pie chart. Select a rack to populate the related widgets.
Server	Lists the server details and utilization for the rack selected in the Rack widget. To view further details of a server, click the required server on the pie chart. Select a server to populate the related widgets.
System Input Power	Lists the system input power graphical details of the server selected in the Server widget. Hover over the graph to view further details.
System Output Power	Lists the system output power graphical details of the server selected in the Server widget. Hover over the graph to view further details.
Inlet Air Temperature	Lists the inlet air temperature to the time of the server selected in the Server widget. Hover over the graph to view further details.
Outlet Air Temperature	Lists the outlet air temperature to the time of the server selected in the Server widget. Hover over the graph to view further details.
Memory Subsystem Power	Lists the memory details.
Effective CPU speed	Lists the effective CPU speed.
Top 10 servers based on system input power	Lists the top 10 servers that have maximum system input power.
Top 10 servers based on system output power	Lists the top 10 servers that have maximum system output power.
Top 10 servers based on memory subsystem power	Lists the top 10 servers that have maximum utilized memory subsystem power.
Top 10 servers based on inlet air temperature	Lists the top 10 servers that have maximum inlet air temperature.
Top 10 servers based on outlet air temperature	Lists the top 10 servers that have maximum outlet air temperature.
Top 10 servers based on effective CPU speed	Lists the top 10 servers that have maximum CPU speed.

Viewing the inventory tree

The inventory tree feature in vROps helps you to browse and select a Lenovo XClarity Adapter resource. The hierarchical structure of the inventory tree shows the relationship among the resources. It enables you to browse and view the resources to the lower level. This view helps to analyze the root cause of issues.

Procedure

To view the inventory tree, complete the following steps.

- 1. Log in to vROps as an admin user.
- 2. Navigate to Environment → Object Browser → Lenovo XClarity Adapter
- 3. View the data collection status:
 - a. To view the collection status and state in the **Objects** pane, select one of the following:
 - Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Rack → Summary
 - Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Chassis → Summary
 - b. To view the object relationship between Lenovo XClarity Adapter and vSphere/vSAN Adapter, select Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Rack → Metrics → Show Object Relationship.

4. To display the polled data, click Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Rack → Metrics → Metrics → Resource group → Metrics (double click on metrics) → Metric Chart..

The left navigation pane displays the Lenovo XClarity Adapter inventory tree.

The Lenovo XClarity Adapter World displays all the Lenovo XClarity Adapter MP resources in a parentchild relationship format. For more details on navigating to a resource, see "Monitoring the discovered resources" on page 17.

Monitoring the discovered resources

This topic gives an overview of the discovered Lenovo XClarity Adapter resources.

The MP discovers and collects defined metrics such as performance data, relationships, events, for the Lenovo XClarity Adapter resources. You can discover the following resources of the Lenovo XClarity ThinkAgile VX system:

Discovered resource	Icon
Rack	
Chassis	

Discovered resource	Icon
Server Node	
PCI devices	
НВА	
Network Adaptor	
Lenovo World	Lenoro
Adapter Instance	XC

Procedure

To view Lenovo XClarity Adapter resources, complete the following steps.

- 1. Log in to vROps as an admin user.
- 2. Navigate to Environment → Object Browser.
- 3. View the resources related to Lenovo XClarity Adapter in the inventory tree, click Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Rack → Summary.

- 5. To view the metrics and badges of the resource:
 - a. Click the **Metrics** tab.
 - b. Click the required resource in the right pane.
 - c. Navigate Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World → Lenovo XClarity Adapter Instance → Rack → Metrics → Metrics → Resource group → Metrics (double click on metrics) → Metric Chart.

Using the badges to monitor resources

Badges are high-level indicators of the system. vROps computes the values of the badges depending upon how the system is performing. Badges are computed on a lot of parameters internally by vROps. One of the important criteria for badge computation is alerts generated in the system with impact specified as a badge.

Based on VMware best practices, the Badge severity is defined. The health badge reflects the current health of a particular object. The Risk badge indicates potential problems that might eventually degrade the performance of the system. For more details of badges, see VMware documentation.

Procedure

To view Lenovo XClarity Adapter resources, complete the following steps.

- 1. Log in to vROps as an admin user.
- Navigate to the Environment tab and navigate to the resource level to view the badges of the resource. For more details on how to navigate to a specific resource, see "Monitoring the discovered resources" on page 17.
- 3. Select the resource and click the **Environment** tab in the right pane.

Viewing alerts

The alerts are fault events that are directly coming from LXCA. The alerts include a short description of the alert and recommendations.

The Lenovo XClarity Adapter Management Pack provides a set of pre-defined alerts and symptoms for resources that the Lenovo XClarity Adapter instance monitors.

The plugin helps to monitor the hardware events in a Lenovo XClarity Administrator-managed environment. Quickly identify trends based on hardware events received, including hardware failures, power/thermal thresholds that exceeded, and PFAs (predicted failure alerts). These events categorize by source, type of hardware surfacing the events, and whether service is required. This information can help identify issues in your data centers so that you can react before more serious issues occur.

Procedure

To view alerts, complete the following steps.

1. Log in to vROps as an admin user.

- 2. To view alerts of specific resources, click Environment → Object Browser → Lenovo XClarity Adapter → Inventory Discovery → Lenovo XClarity Adapter World, and select the target resource.
- 3. Click the **Alerts** tab in the right pane to view the alerts of the selected resource.

4. To view more details of each alert, click the alerts link to open the details in the right pane. For more details on Alerts, see **VMware documentation**.

Please note that if two or more alerts are triggered in LXCA with the same msgID and different commonEventIDs, then only one alert is triggered in vROps that is defined for the msgID. A common alert message is created by using an alert message from all alerts with the same msgID from LXCA.

For example; Alert message in vROps is displayed as follows:

[Alert 1 message] [Alert 2 message] [Alert 3 message] [...] [...]

22 Lenovo XClarity Integrator Management Pack for VMware vRealize Operations Manager Installation and User Guide

Appendix A. Troubleshooting

This chapter provides the details to view the logs troubleshoot and resolve problems with Lenovo XClarity vROps.

The logs cannot be found

This topic provides information about the MP logs and their location. The MP must provide logging details at various log levels including INFO, DEBUG, TRACE, and ERROR.

Procedure

To view logs, complete the following steps:

- 1. Log in to vROps as an admin user.
- 2. Click Administration → Support Logs.
- 3. Expand the node **Collector** → adapters → Lenovo XClarity Adapter folder to view the list of available log files.
- 4. Double-click the log entry to view the details of a specific log.

Note: For V8.5 and earlier versions of vROps, navigate to Administration \rightarrow Support \rightarrow Logs.

The record of installation errors cannot be found

For any installation-related errors and exceptions, check the collector.log file.

Procedure

To view logs, complete the following steps.

- 1. Log in to vROps as an admin user.
- 2. Click Administration.
- 3. In the left pane, select **Support Logs**.

Note: For V8.5 and earlier versions of vROps, select Support → Logs.

4. In the Logs pane, click <Master node IP>, and click View_Bridge \rightarrow view-bridge.log.

Duplicate dashboard entries are listed

Cause

If the management pack was upgraded without selecting the **Reset Default Content** option, duplicate dashboard entries are listed. You must select this option so that the alert definitions, symptoms, recommendations, policy definitions, views, dashboards, reports are overwritten. For details on installing the MP, see "Installing the Lenovo XClarity Adapter" on page 4.

Solution

To remove the duplicate dashboard entries in V8.6.2 of vROps, do the following:

- 1. Log in to the vRealize Operations Manager UI using admin credentials.
- 2. Navigate to **Visualize** \rightarrow **Dashboards**.
- 3. In the right pane, click All \rightarrow Lenovo XClarity.

vm vRealize C	Operations						C Δ .

4. Select the target duplicate dashboards and click ACTIONS → Delete Dashboard

Note: For V8.5 and earlier verisons of vROps, click **Dashboards**, click **E** to display the **Manage Dashboards** page. Select the target duplicate dashboard, click the menu icon to display its options, select the target option, and click the delete icon.

The resources cannot be displayed on dashboards

Issue

The resources are not displayed on the **Lenovo XClarity Details** and **Lenovo XClarity Power & Thermal Information** dashboards.

Cause

The dashboards are not listing the resources as the rack is not available in LXCA.

Solution

Add a rack in LXCA to list the rack details and rack servers in the dashboard widgets.
